

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicants: Nobuhiko OOHARA et al. Art Unit: 1626
U.S. Patent No. 7,411,096 Examiner: Nolan, J.
Date of Patent: August 12, 2008 Application No.: 10/564,985
Filed : January 18, 2006
Title : PROCESS FOR PRODUCING OPTICALLY ACTIVE PHOSPHORUS
 HETEROCYCLIC DIMER

ATTENTION: CERTIFICATE OF CORRECTIONS BRANCH

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

REQUEST FOR CERTIFICATE OF CORRECTION

Sir:

In reviewing the above-identified patent, a printing error was discovered therein requiring correction in order to conform to the Official Record in the application.

The error noted is set forth on the attached copy of Form PTO/SB/44 (09-07) in the manner required by the Commissioner's Notice.

Upon reviewing the patent it was noted that in the Abstract, line 7 of the first page of the patent, "Y-C_nH_{2n}-Y" should be deleted and the following formula added in its place
--Y-C_nH_{2n}-Y--.

It is submitted that no fee is necessary for this request, as this error was incurred by the U.S. Patent and Trademark Office (USPTO). Please see the enclosed copy of the Abstract

filed with the application. If the USPTO determines that it is necessary to charge the Certificate of Correction fee, the USPTO staff person in charge of this issue should contact the undersigned to discuss obtaining authorization to charge this fee to our Deposit Account.

Accordingly, applicants respectfully request the USPTO to issue the Certificate of Correction for this patent.

If there are any questions regarding this application, please telephone the undersigned at the telephone number listed below.

Respectfully submitted,

Date: September 3, 2008

Randolph A. Smith

ABSTRACT

Primary phosphine represented by formula (1):

[Chem. 1]

(wherein R represents a linear, branched, or cyclic alkyl group having 2 to 20 carbon atoms) is reacted with a compound represented by formula (2):

[Chem. 2]

(wherein Y represents a halogen atom or a leaving group selected from -OTs, -OTf, and -OMs, and n represents a number of 3 to 6) in the presence of a base; the product is reacted with boron trihydride, oxygen, or sulfur to obtain a phosphorus heterocyclic compound represented by formula (3):

[Chem. 3]

(wherein R represents the same as the above, n represents a number of 1 to 4, X represents a boron trihydride group, an oxygen atom, or a sulfur atom, and == represents a single bond when X is a boron trihydride group or a double bond when X is an oxygen atom or sulfur atom); the resultant compound is dimerized to produce a phosphorus heterocyclic dimer represented by formula (4):

[Chem. 4]

(wherein R, n, and X represent the same as the above); and then oxygen, sulfur, or borane is removed from the resultant phosphorus heterocyclic dimer to obtain an optically active phosphorus heterocyclic dimer represented by formula (5):

[Chem. 5]

(wherein R and n represent the same as the above).
